WATER

INDUSTRIAL

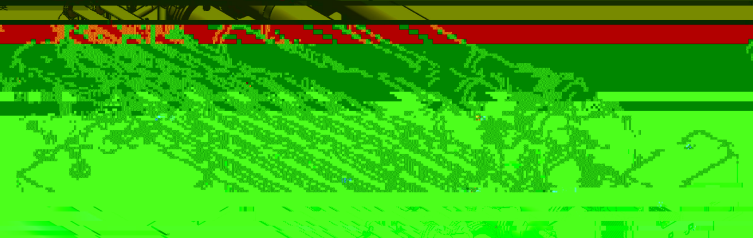

Water is a vital resource for industrial processes, and ensuring its availability and quality is a top priority for industrial facilities.

WATER

INDUSTRIAL

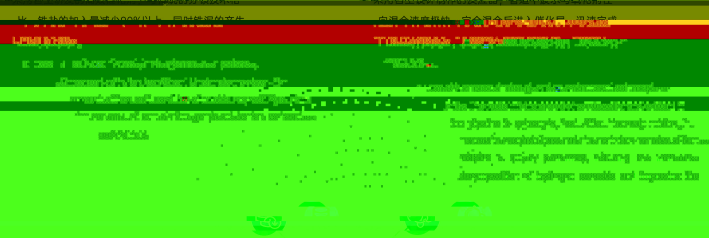

Water is a vital resource for industrial processes, and ensuring its availability and quality is a top priority for industrial facilities.

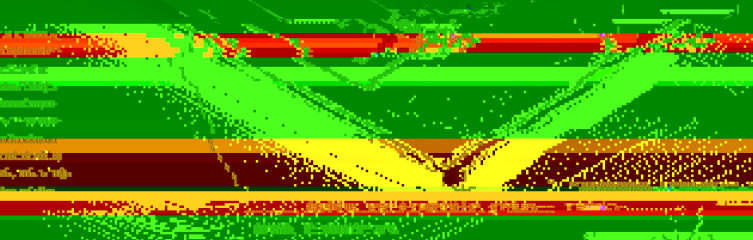

WATER TREATMENT

Water treatment is a critical process for ensuring the quality and safety of water used in industrial processes. It involves a series of steps to remove impurities and contaminants from the water.

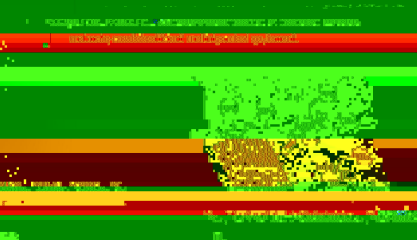

WATER TREATMENT

Water treatment is a critical process for ensuring the quality and safety of water used in industrial processes. It involves a series of steps to remove impurities and contaminants from the water.

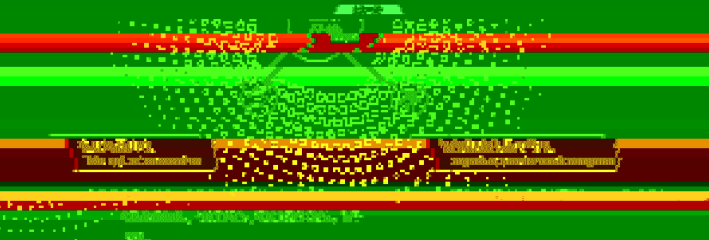

The water treatment process is a complex one, involving a variety of technologies and techniques. It is essential for ensuring that the water used in industrial processes is clean and safe.
